

I am currently an Associate Professor in Computer Science at Washington State University, and was previously Assistant Professor at the University of Alabama at Birmingham and a Victor Basili Fellow at the University of Maryland, at College Park.

## Education

<b>University of Utah</b>	Ph.D.	2017
---------------------------	-------	------

Developed a unified methodology for polyvariant (*e.g.*, flow/call/arg/obj sensitive) program analysis.

I applied this framework to produce a self-reflective form of polyvariance for continuations that avoids all return-flow conflation of values (a long-standing problem for control-flow analyses), guaranteeing ideal stack precision at no cost to average or worst-case model complexity, and at in terms of human labor to implement ( $\sim 1\text{LOC}$  in proposed framework). Proved that the precision is equal to an incomputable analysis with an unbounded stack and mechanically verified the proof using the Coq proof assistant. My dissertation is titled “*Introspective Polyvariance for Control-Flow Analyses*”.

----------------------------	-----------------------------	-----------------------

Working on research into scalable, tunable program analysis, program verification, logic solvers on high performance computers and clusters, and linguistic mechanisms for enforcing correctness, security/privacy, and termination properties of software; regularly teaching undergraduate and graduate-level classes in compilers and programming languages. Won an ARPA-H subaward to investigate private and secure querying for EHR systems, contracting with Galois, inc.

<b>Assistant Professor</b>	U. of Alabama, Birmingham	2018 - 2024
----------------------------	---------------------------	-------------

Developed my research program in high-performance reasoning and program analysis; regularly taught undergraduate and graduate-level classes in automata theory, programming languages, and automated reasoning. <b>Victor Basili Fellow</b>	U. of Maryland, College Park	2016 - 2018
-----------------------------	------------------------------	-------------

Joined UMD’s PLUM lab with Michael W. Hicks, Jeffery Foster, and David Van Horn; worked on various collaborative projects including: soft contract verification, approximating permission-use provenance in Android, accelerating flow analyses in Datalog, and verification of faceted programs, among others. A departmental fellowship granted me great freedom to pursue long-term research.

<b>Instructor</b>	U. of Maryland, College Park	2017 - 2018
-------------------	------------------------------	-------------

While at UMD, I taught a section of the Intro to Programming Languages course and developed a new Compilers course in which my students built an R<sup>7</sup>RS Scheme Compiler from scratch.
